

Ketra D2 Downlight

The world's most innovative light source—evolved

Vibrant, Dynamic, & Limitless

The Ketra **Dynamic Spectrum** allows you to tune the perfect light for every moment. Follow the natural rhythm of daylight, warmly dim down to 0.1%, or turn the dial up on vibrancy to completely transform artwork, making vivid colors pop.

A Palette That Inspires

Endless possibilities and unparalleled precision define the Ketra **High Def Palette**. Choose from a wide spectrum of high CRI whites, saturated colors, and pastels with 16.7 million colors at your fingertips.

Superior Optics for Uniform Light

Place light precisely where you want it—and nowhere else. Ketra **TruBeam** combines an emitter and other optics to produce the maximum range of beam spreads, while maintaining uniform color and intensity.

Precision Color for Life

With other LED solutions, colors can degrade over time—or mismatch if LEDs are sourced from multiple manufacturers. Ketra **Color Lock** aligns color points across individual light sources, actively preserving accurate, beautiful hues for the life of the light.

Create immersive experiences

Extend the Ketra experience to every layer of light with a slim, modular fixture that fits in smaller spaces.

Precision, performance, and craft—reimagined

Ketra D2 downlight redefines the boundaries of physics—every detail has been reengineered, redesigned, and optimized, from the emitter and optic profile to the re-tooled aiming system and best-in-class housings. Experience exceptional Ketra light quality in a downlight that's quieter, more artful, and more precise than anything before it.

Two-Inch Aperture

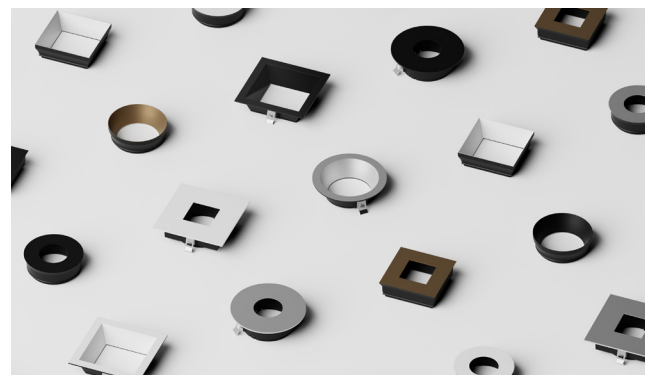

Breakthrough optics and a smaller aperture allow the fixture to disappear into the ceiling, placing the focus where it should be—on the light itself.

In-Field Adaptability

Diffuse light, reduce glare, or refine the room-side appearance with a suite of lenses and accessories that can be easily placed both at the primary optic and the trim. Combine two to tailor light for maximum beam control.

Artful Attention to Detail

Harmonize ceiling aesthetics with the home's design details. D2 trims are meticulously sculpted in die-cast aluminum, honed to a fine, nearly invisible edge, and painted to maintain a smooth, flush-to-the-ceiling appearance.

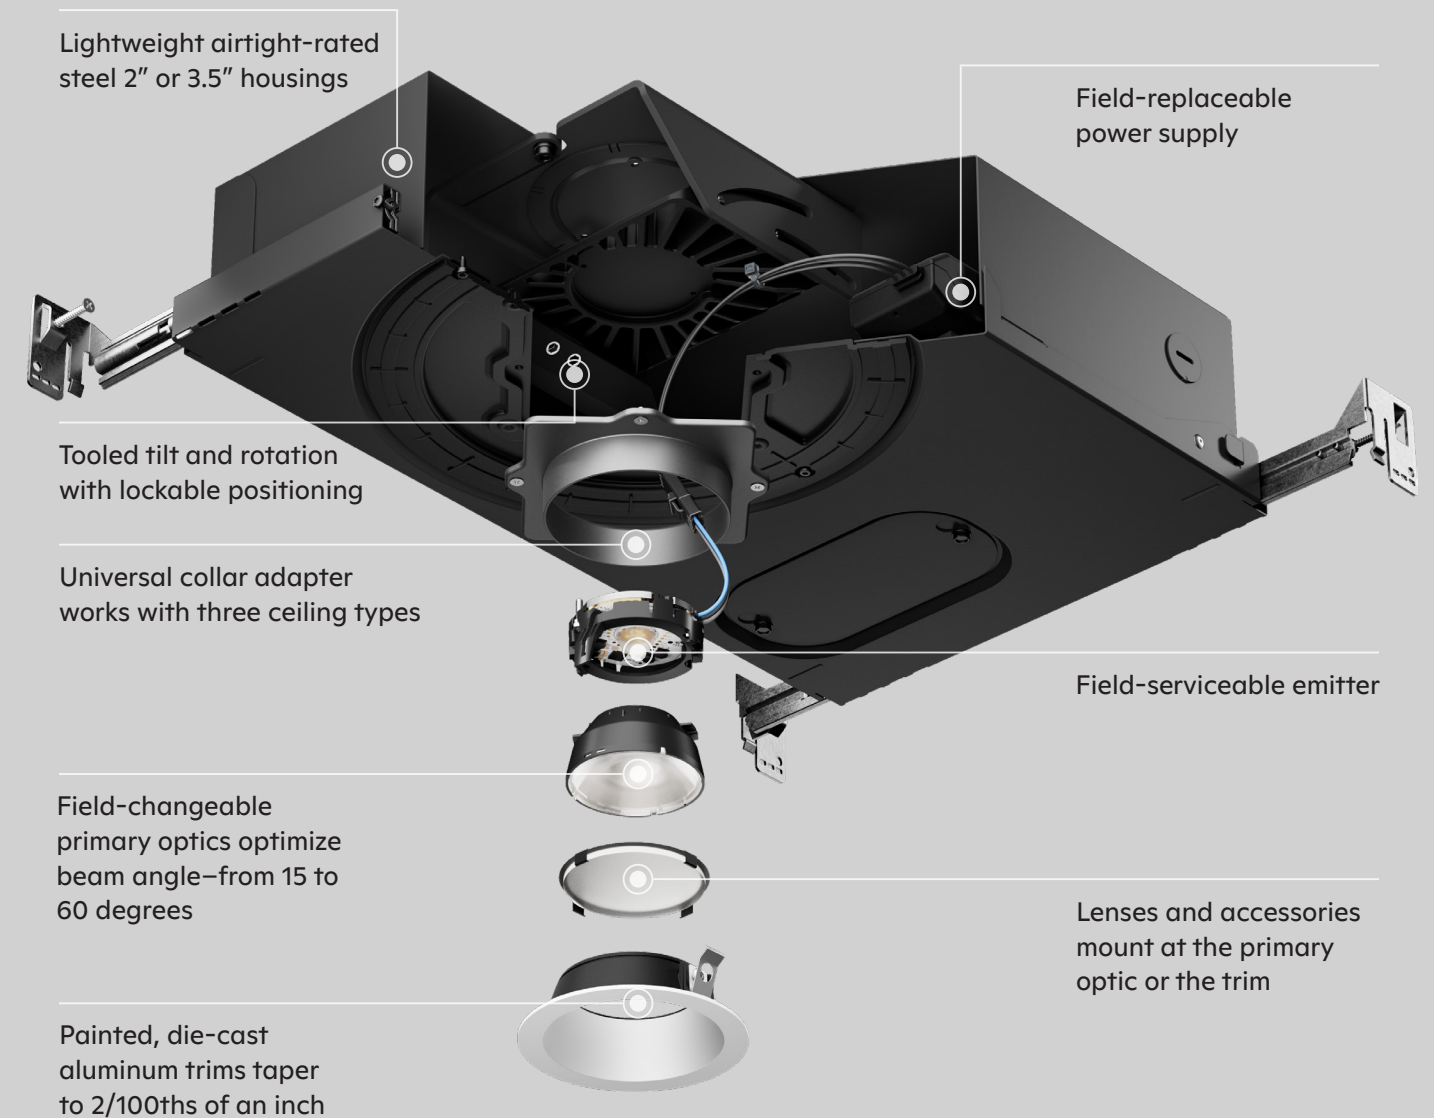

Exacting Aim and Focus

A tool-based hot-aiming system with lockable positioning makes even micro adjustments ergonomic and intuitive. Fine-tune the fixture for 0-40-degree tilt or 364-degree rotation without obstructing the beam of light.

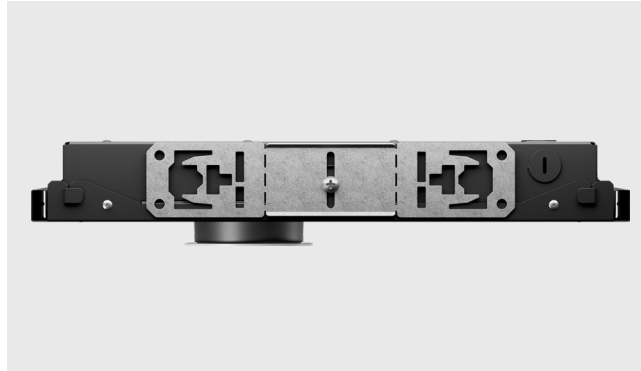

Anatomy of the Ketra D2 Downlight

Using a system of interchangeable parts and components, each D2 downlight can be customized to meet the design and architectural needs of the space in which it lives.

Two Ultra Slim Housings

2" Housing

Fixed or Wall Wash

Built with an ultra-shallow profile for added ceiling height and the tightest plenum spaces.

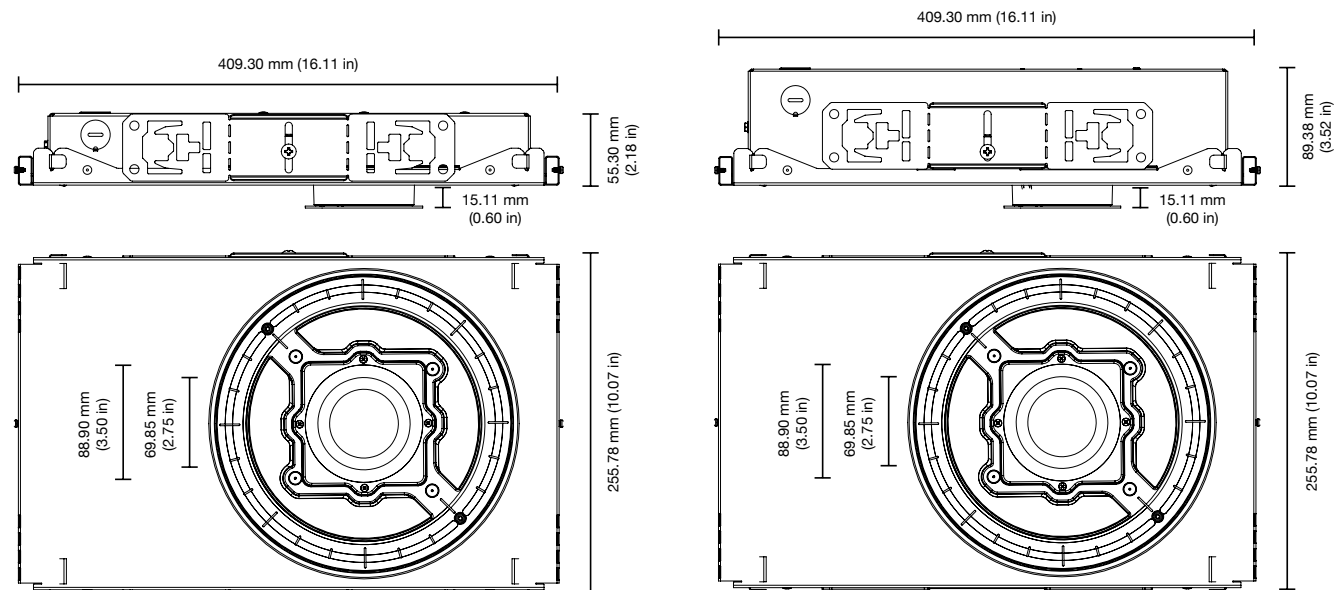

3.5" Housing

Adjustable

Tool-based aiming allows you to showcase your space with precision and adapt to interior design changes easily.
